

Retriever Schedule

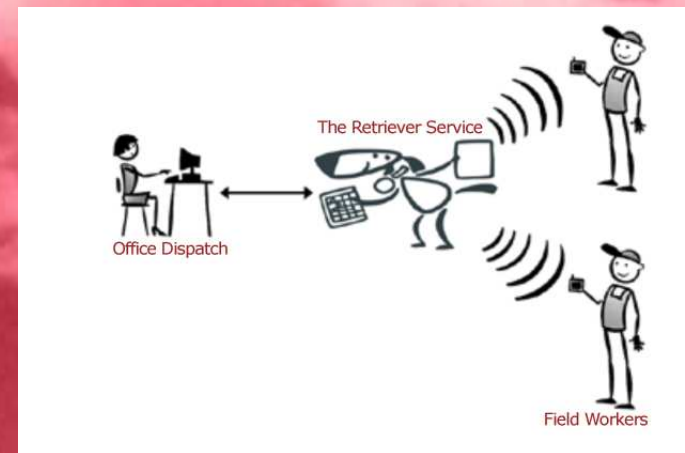

Retriever Schedule provides the technology for efficient job planning, assignment and dynamic field connectivity – used to enable an increase in efficient field worker utilization and heighten responsiveness to adhoc, breakdown or emergency work situations.

Scheduling software maximizes worker performance and wireless field allocation.

Dispatch software sends the jobs out into the field through the use of wireless technology and efficient worker scheduling.

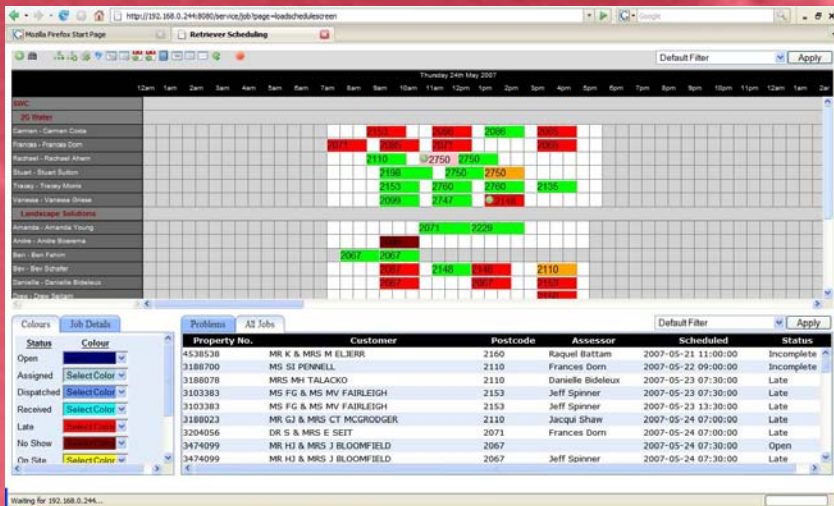

Solution Features

- Optimized, automated and/or manual job assignment and dispatch
- Flexible management of field worker availability
- Multiple user web based application
- Subcontractor and customer portals
- Dispatched directly to Retriever Mobile
- Integration with asset management, works planning, rostering, GIS, service and financial systems
- These applications can be customized to suit specific business processes

Key Benefits

- Better achievement of contracted service level agreements
- Field workers completing more jobs per day
- Increased flexibility for team and crew assignment
- Improved worker, equipment and vehicle utilization
- Increases transparency of field operations
- Minimized job scheduling administration
- Decreased telecommunications costs

Web Based Scheduling - Dynamic Management

About Retriever's Product Suite

Retriever's Product Suite delivers wireless field force automation solutions to drive field worker mobility.

Optimized and automated mobility applications deliver tailored and flexible mobility solutions in a diverse range of industries - aiming to improve the productivity of workers in the field every time.

Retriever technology has been proven as a scalable and versatile development tool that enables quick application building and the achievement of rapid, risk free business results.
